

YANG BOT

WHITEPAPER | yangbot.ai

Getting to know the project

Yang Bot is a crypto project designed to make life easier in our daily crypto activities, to ultimately maximize our chances of making significant profit from trading crypto right on our favorite app; Telegram. We have very powerful Telegram based AI powered products that are deeply rooted in AI capabilities, to ensure that tasks are done effortlessly for the users, especially crypto education purposes, profit making and crypto development purposes. We have identified a few aspects of the cryptocurrency space that we could improve with our traditional AI powered products. As you go through this whitepaper, you will get to learn about each of the Yang Bot products.

The project has been built on strong foundation that will ultimately bring about great success of Yang Bot in the crypto world.

Yang Bot project is bridging the gap between the Artificial intelligence and the Crypto currency, through strategically built ecosystem that is cushioned by highly experienced development and marketing team.

Our AI Powered Bots are intended to generate revenue for the project and drive the adoption of the \$YANGBOT token. The effectiveness of these bots in their distinct fields will ultimately entice users from every corner of the crypto world, this will translate into very high adoption level of the native token, therefore ensuring healthy price growth.

Yang Bot Products & Features

AI Powered Products

Global Marketing

Yang ChatBot

We have effectively bridged Chat-GPT database with crypto aggregators vast information database on crypto coins and tokens, to enable our chat bot effectively give accurate answers to crypto related questions in real time. Yang ChatBot is a telegram bot that gives all crypto stakeholders worldwide, the opportunity to get real time live information about any coin or token. information such as marketcap, price, holders, ownership etc can be gotten through the Yang Chat Bot effectively without having to open aggregator websites such as coinmarketcap and coingecko.

This bot will be highly helpful in the crypto space, as it is being developed to have its own database on the Yang Bot server, to be able to give answers to users at a very high speed and 100% accuracy.

Yang Trading Bot

Our trading bot promises to give maximum profit to the users, as they are afforded the opportunity to use numerous features that have been embedded into the trading bot. Yang sniping bot feature has the ability to snipe tokens at 0.05 seconds of being added to the liquidity pool, snipe any new token launch or IDO without any need of running your own Ethereum nodes.

Yang Trading Bot has been developed to be fully compatible with all available chains at the moment, such as: Ethereum, Smart chain, Solana, Avalanche, Artrium, Base chain and many more.

Unlike other sniping bots out there, you do not need download stand-alone app or connect to our website, to be able to use our sniping bot. This bot can be effectively run from your telegram account, making use pancakeswap router, uniswap router, Base router and others.

Features

- Automatically buy and sell your tokens at preset price deviations.
- Find successful traders and automatically copy their trades.
- Pre-set your trades on the integrated TradingView Chart and Indicators.
- Be the first to buy any new token launch on all major DEXES.
- Create unlimited number of wallets
- Cheapest fee: 0.3%

Yang BuyBot

Yang Buybot is equipped with innovative features that sets it apart from the pre-existing buybots in the space. Just as some of the other buybots, it is multichain compatible and designed to be income generating source for the project. crypto projects can be advertised on our price bot, the advertised projects being shown in all telegram groups that the buybot is added in. But of course, premium users of our buybot have to hold a certain amount of the \$YANGBOT token, to get access to the premium features of the bot. The bot allows media files attachment to the buy update; JPEG, MP4 and GIF. Also our buybot has the feature to play notification sound in the telegram group, upon every buy update.

About Yang Token

\$YANGBOT token is the native currency of the Yang Bot project and it is being used as means of transaction across the ecosystem. It gives access to our various bots and also affords the premium features for the users. The token whole supply will be used in creating liquidity in the liquidity pool, leaving no token with the team or unlocked.
